

GENERALI OSZCZĘDNOŚCIOWY

Money instruments for Individual Clients

The investment objective of the subfund is to increase the value of the subfund's assets as a result of the increase in the value of investments. Generali Oszczędnościowy is a subfund of corporate debt securities. The subfund invests mainly in debt securities issued by companies for which the interest rate is set for periods not longer than 397 days or the time remaining for repurchase does not exceed 397 days. The subfund may also invest in debt instruments issued by governments. The subfund may invest in foreign debt instruments and derivatives in order to hedge currency risk. The Subfund is not a money market fund within the meaning of the FRP Regulation.

1	2	3	4	5
1 – minimal			4 – high	
2 – low			5 – highest	
3 – moderate				

The Risk Profile in this document is not the same as the Profit and Risk Profile indicated in the Key Investor Information Document (KIID) due to the fact that it is not based only on historical data, but takes into account additional significant risks and circumstances that affect the behavior of the Subfund. The final level of risk is the result of analysis in accordance with the model adopted by the Company, in which we assess and communicate in detail all elements that may affect the risk associated with the investment.

Recommended minimal investment horizon:

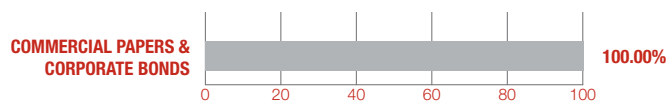

Sub-fund performance vs. benchmark*

	1 month	3 months	6 months	1 year	2 years	5 years	10 years
Generali Oszczędnościowy (%)	0.46	-0.92	-0.09	0.85	2.97	9.63	-
Benchmark (%)	0.07	0.30	0.65	1.36	2.77	7.17	-
Difference	0.38	-1.22	-0.74	-0.51	0.19	2.46	-

* Performance of the sub-fund and its benchmark is calculated on the basis of last working days of each month.
Data based on own calculations from April 30, 2020.

Dictionary

Beta to benchmark – this ratio shows the relation between changes in the value of a fund unit and the benchmark. Beta of 1 means that changes in the value of a fund unit are the same as of the benchmark, which suggests that the composition of instruments in the fund is the same as the composition of instruments in the benchmark. Beta below 1 means that a growth (decrease) in the benchmark by 1% is usually connected with a growth (decrease) in the value of a fund unit by less than 1%. Beta over 1 means that a growth (decrease) in the benchmark by 1% is usually connected with a growth (decrease) in the value of a fund unit by more than 1%.

Information ratio – this ratio shows the profitability of risk borne by the fund compared to its benchmark. The higher the information ratio, the lower the risk at which the return of the fund is generated compared to the benchmark. The fund with the information ratio over 0.3 is considered as effectively managed.

Tracking error – this ratio shows how risky the given fund is compared to its benchmark. The higher the ratio, the more aggressively is the fund managed compared to its benchmark. The ratio is used to compare the risk of funds with a similar profile (e.g. equity funds).

Sharpe's ratio – this ratio shows the profitability of risk borne by the fund compared to safe investments (e.g. treasury bonds). The higher the Sharpe's ratio, the lower the risk at which the return of the fund is generated compared to safe investments.

Standard deviation – this ratio shows how risky the given fund is. The higher the ratio, the more volatile the price of a fund unit. This ratio is used to compare the risk of funds with a similar profile (e.g. equity funds).

Duration – this ratio shows the change in the value of the debt part of the fund in reaction to a change in interest rates. The higher the duration, the bigger effect of a change in interest rates on a change in the value of a fund unit i.e. the higher the risk connected with the same.

YTM – (yield to maturity) – this ratio shows the rate of return that investors obtain when buying a bond at the current market price and holding it in their portfolio until maturity.

Beta to WIG – this ratio shows the relation between changes in the value of a fund unit and changes in the WIG index. Beta of 1 means that changes in the value of a fund unit are the same as changes in the WIG index. Beta below 1 means that a growth (decrease) in the benchmark by 1% is usually connected with a growth (decrease) in the value of the WIG index by less than 1%. Beta over 1 means that a growth (decrease) in the WIG index by 1% is usually connected with a growth (decrease) in the value of a fund unit by more than 1%.
