

# GENERALI EURO

## Debt securities sub-fund in EUR

The investment objective of the sub-fund is an increase in the value of assets as a result of investment value growth. Generali Euro is the sub-fund of debt securities denominated in EUR. The sub-fund applies the rules and investment limitations for a closed-end investment fund. The sub-fund invests mainly in debt instruments from the region of Central and Eastern Europe whose interest rate is fixed for periods not longer than 397 days or that have a residual maturity of 397 days or less. No less than 50% of the sub-fund assets are denominated in EUR. The object of sub-fund investments can be debt instruments issued by enterprises or state governments. The sub-fund can also invest in global developed markets.

### Sub-fund performance vs. benchmark

The discussed risk indicator is retrieved from Key Investor Information. The indicator is determined based on the historical volatility of the sub-fund's returns resulting from the investment policy implemented and may change in the future. Even the lowest risk category does not mean that the sub-fund is risk-free. Other risks associated with investing in a sub-fund that are not taken into account by the indicator are presented in the Key Investor Information and Fund Prospectuses.

**Recommended minimal investment horizon:**

### Sub-fund performance vs. benchmark\*

	1 month	3 months	6 months	1 year	2 years	5 years	10 years
<b>Generali Euro (%)</b>	0.22	0.74	-0.90	-0.89	-0.83	0.66	11.78
Benchmark (%)	-0.04	-0.12	-0.23	-0.46	-0.83	-1.79	0.31
Difference	0.26	0.86	-0.66	-0.44	0.00	2.45	11.47

\* Performance of the sub-fund and its benchmark is calculated on the basis of last working days of each month. Data based on own calculations from July 31, 2020.

## Dictionary

**Sharpe's ratio** – this ratio shows the profitability of risk borne by the fund compared to safe investments (e.g. treasury bonds). The higher the Sharpe's ratio, the lower the risk at which the return of the fund is generated compared to safe investments.

**Standard deviation** – this ratio shows how risky the given fund is. The higher the ratio, the more volatile the price of a fund unit. This ratio is used to compare the risk of funds with a similar profile (e.g. equity funds).

**Duration** – this ratio shows the change in the value of the debt part of the fund in reaction to a change in interest rates. The higher the duration, the bigger effect of a change in interest rates on a change in the value of a fund unit i.e. the higher the risk connected with the same.

**YTM** – (yield to maturity) – this ratio shows the rate of return that investors obtain when buying a bond at the current market price and holding it in their portfolio until maturity.
