Sub-fund performance

Lower risk, prospects of lower profits ← Higher risk, prospects of higher profits →

The discussed risk indicator is retrieved from Key Investor Information. The indicator is determined based on the historical volatility of the sub-fund's returns resulting from the investment policy implemented and may change in the future. Even the lowest risk category does not mean that the sub-fund is risk-free. Other risks associated with investing in a sub-fund that are not taken into account by the indicator are presented in the Key Investor Information and Fund Prospectuses.

Dictionary

Beta to WIG – this ratio shows the relation between changes in the value of a fund unit and changes in the WIG index. Beta of 1 means that changes in the value of a fund unit are the same as changes in the WIG index. Beta below 1 means that a growth (decrease) in the benchmark by 1% is usually connected with a growth (decrease) in the value of the WIG index by less than 1%. Beta over 1 means that a growth (decrease) in the WIG index by 1% is usually connected with a growth (decrease) in the value of a fund unit by more than 1%.

Sharpe's ratio – this ratio shows the profitability of risk borne by the fund compared to safe investments (e.g. treasury bonds). The higher the Sharpe's ratio, the lower the risk at which the return of the fund is generated compared to safe investments.

Standard deviation – this ratio shows how risky the given fund is. The higher the ratio, the more volatile the price of a fund unit. This ratio is used to compare the risk of funds with a similar profile (e.g. equity funds).
