

GENERALI OBLIGACJE AKTYWNY

Debt sub-fund

Generali Obligacje Aktywne is a debt sub-fund, which assets are allocated mainly in bonds and money market instruments of issuers from Poland and those from the Central and East European countries, as well as in equity derivatives. The sub-fund is characterized by lack of strict rules concerning selection of portfolio assets and their high volatility in portfolio. Sub-fund's investments in assets are made mainly based on the current evaluation and projections for the macroeconomic developments in the country of the issuer, as well as their impact on market interest rates.

Dictionary

Beta to WIG – this ratio shows the relation between changes in the value of a fund unit and changes in the WIG index. Beta of 1 means that changes in the value of a fund unit are the same as changes in the WIG index. Beta below 1 means that a growth (decrease) in the benchmark by 1% is usually connected with a growth (decrease) in the value of the WIG index by less than 1%. Beta over 1 means that a growth (decrease) in the WIG index by 1% is usually connected with a growth (decrease) in the value of a fund unit by more than 1%.

Sharpe's ratio – this ratio shows the profitability of risk borne by the fund compared to safe investments (e.g. treasury bonds). The higher the Sharpe's ratio, the lower the risk at which the return of the fund is generated compared to safe investments.

Standard deviation – this ratio shows how risky the given fund is. The higher the ratio, the more volatile the price of a fund unit. This ratio is used to compare the risk of funds with a similar profile (e.g. equity funds).

Duration – this ratio shows the change in the value of the debt part of the fund in reaction to a change in interest rates. The higher the duration, the bigger effect of a change in interest rates on a change in the value of a fund unit i.e. the higher the risk connected with the same.

YTM – (yield to maturity) – this ratio shows the rate of return that investors obtain when buying a bond at the current market price and holding it in their portfolio until maturity.
