

GENERALI ZŁOTA

Equity sub-fund

The subfund's main investment asset are instruments with direct or indirect exposure to gold. The results of the subfund depend on the price of gold or other financial instruments issued by entities dealing with gold exploration, mining, processing or trading. The exchange rate risk is hedged, meaning the rate of return on the fund reflects the rate of return on investment in gold in the US dollar.

The subfund is investing in gold through instruments such as: ETC (Exchange-Traded Commodity) and ETF (Exchange-Traded Fund). Additionally, it may invest in shares, subscription warrants, rights to shares, subscription rights and depository receipts. Part of the assets may be other categories of investments listed in the fund statute, in particular debt securities and money market instruments.

On January 11, 2020, the investment policy and the name of the fund changed. Old name of the fund – Generali Akcje Daleki Wschód.

Dictionary

Beta to WIG – this ratio shows the relation between changes in the value of a fund unit and changes in the WIG index. Beta of 1 means that changes in the value of a fund unit are the same as changes in the WIG index. Beta below 1 means that a growth (decrease) in the benchmark by 1% is usually connected with a growth (decrease) in the value of the WIG index by less than 1%. Beta over 1 means that a growth (decrease) in the WIG index by 1% is usually connected with a growth (decrease) in the value of a fund unit by more than 1%.

Sharpe's ratio – this ratio shows the profitability of risk borne by the fund compared to safe investments (e.g. treasury bonds). The higher the Sharpe's ratio, the lower the risk at which the return of the fund is generated compared to safe investments.

Standard deviation – this ratio shows how risky the given fund is. The higher the ratio, the more volatile the price of a fund unit. This ratio is used to compare the risk of funds with a similar profile (e.g. equity funds).

Duration – this ratio shows the change in the value of the debt part of the fund in reaction to a change in interest rates. The higher the duration, the bigger effect of a change in interest rates on a change in the value of a fund unit i.e. the higher the risk connected with the same.

YTM – (yield to maturity) – this ratio shows the rate of return that investors obtain when buying a bond at the current market price and holding it in their portfolio until maturity.
